

MCS Pro

Tabber/Labeler

The MCS Pro Tabber/Labeler was designed for the professional mail shop. The inline design allows the MCS Pro Tabber/Labeler to be used with almost all existing professional paper handling equipment used in the mailing industry today including friction feeders inserters and inkjet bases.

The intelligent rugged design makes it ideal for high speed application of mailing tabs, labels, stamps and post-it-notes. The unit can be operated as a stand alone with a feeder, or in-line with other equipment. As a tabber, the MCS Pro Tabber can apply up to three tabs per mailing piece in one pass, and can wrap the tab on the top or bottom of the piece.

The four inch label option on the MCS Pro Tabber/Labeler allows Labels and Post-It-Notes up to four inches wide!
